Summary

Computer Science undergraduate specializing in AI & Data Science, with experience building and deploying full-stack and AI-powered applications involving real-time systems, LLM integration, and data pipelines.

Education

Indian Institute of Information Technology, Kottayam — **Aug 2023 – Apr 2027**
B.Tech. – CSE with AI and Data Science — *Kottayam, India*
CGPA: 7.3 – Till Sem 6

Sri Chaitanya Educational Institution, Andhra Pradesh — **Jul 2020 – May 2022**
Intermediate (925/1000) — *Andhra Pradesh, India*

Experience

- **Freelance Full-Stack Developer** — **May 2025 – Aug 2025**
  Developed and delivered multiple full-stack websites for clients, implementing frontend interfaces and backend functionality based on project requirements.
- **College Fest Website** — **Feb 2026 – Mar 2026**
  Built a website for carnival games at a college fest, providing event information and interactive features for participants.

Skills

Core CS	Operating Systems, DBMS, Computer Networks, OOPS
Languages	C, C++, Python, JavaScript, TypeScript
Frontend	HTML5, CSS3, React.js, Next.js, Tailwind CSS, Vite
Backend	Node.js, Express.js, Hono, FastAPI, REST APIs
Databases	MongoDB, MySQL, Snowflake, Redis
AI / ML	Machine Learning, NLP, Computer Vision, Generative AI, Multi-Agent Systems, OpenCV
Tools	Git, GitHub, VS Code, Render, Vercel, Postman

Projects

Credix — AI-Powered Credit Coaching Platform — GitHub
Tech Stack: TypeScript, Mastra, Hono, Python, FastAPI, MongoDB, Snowflake, Redis/Pogocache

- Built a privacy-first multi-agent platform that analyzes credit reports and delivers personalized score-improvement plans, credit-card recommendations, and insurance guidance.
- Engineered deterministic agent workflows using Mastra and Hono, backed by a Python/FastAPI service for reproducible, auditable recommendations.
- Designed a Redis/Pogocache → MongoDB → Snowflake data pipeline with PII masking, server-side signal computation, read-through caching, and OpenTelemetry tracing.

RepoLens AI — AI-Powered Repository Intelligence — Live | GitHub
Tech Stack: React, TypeScript, Vite, Node.js, Express.js, MongoDB, Gemini API, JWT/OAuth 2.0

- Built a full-stack tool that analyzes GitHub repositories and generates structured architecture and dependency insights.
- Automated repository cloning, source scanning, import/export extraction, dependency graph generation, important-file ranking, and health metrics.
- Integrated Gemini with context-aware code retrieval and streaming chat for repository questions, secured using JWT/OAuth 2.0.

SplitMint — Real-Time Expense Sharing Platform — Live | GitHub
Tech Stack: React, Vite, Tailwind CSS, Node.js, Express.js, MongoDB, Socket.IO, JWT/OAuth 2.0, Recharts

- Built an expense-sharing platform supporting group splits, shared budgets, recurring expenses, and settlement tracking.
- Developed REST APIs using Express.js and Mongoose for expenses, groups, budgets, categories, settlements, and users.
- Implemented real-time updates with Socket.IO, JWT/Google OAuth authentication, and Recharts dashboards for spending analytics.

Achievements

- Solved 150+ DSA problems across LeetCode and GeeksforGeeks.
- Built a drone from scratch during a hands-on workshop, gaining practical experience in drone assembly and hardware integration.
